

IMPORTANT, PLEASE READ THESE INSTRUCTIONS.

There is only one way to construct a carrier correctly.

1. Fully loosen the black webbing on side wings, and the Velcro tab which joins the bag part to the adult harness, located below the warning label.

2. Place the carrier upside down with the fleecy child seat on the floor. Open the carrier as wide as possible so it can stand on its own.

3. With the blue U shape frame tilted slightly downwards, slide the rubberised pocket over the top of the frame.

4. Making sure the carrier is still tilted, slide wide open, lift the rubberised pocket and frame upwards.

5. Slide down to insert the yellow locking wedges into the black hinges.

6. Pull the loose fabric over the black hinges, as tightly as possible.

7. Clip the 2 yellow buckles on the base and tighten as much as possible. The frame should not be visible on the base.

8. Re-connect the Velcro tab behind the lumbar pad.

To unpack, reverse these instructions, remember that to undo the yellow locking wedges you must pull the U frame slightly upwards first.
